

Safety Message of the Day for IMEA Members

Personal Protective Equipment – Eye Protection Safety Message

Think of some excuse you have used (or heard others use) for not wearing your eye protection: they are not comfortable; they are dirty; they fogged up, you were going to be doing a hazardous task for just a few seconds and did not want to stop and put them on . . .

While you may think some or all of these excuses sound like good reasons for not wearing your safety glasses or goggles at work, consider what could happen if an accident occurred and injured one or both of your eyes. Is it worth risking injury, or even blindness, for any one of those reasons? Absolutely not!

OSHA's standards for eye protection are intended to help prevent accidents that can lead to serious injuries, up to including blindness, caused by a variety of hazards.

Here are some of the major requirements of the OSHA standards for eye and face protection that help protect you:

- * All eye and face protection devices, such as safety glasses, goggles, and face shields must be marked that they meet or exceed the test requirements of ANSI Z87.1. The marking is typically located somewhere on the frame of the glasses or goggles.
- * Safety glasses used to protect workers from flying objects must also have side protectors built into the design, or attachable side shields that meet the above-referenced ANSI standard, to prevent objects and particles from injuring your eyes from the sides. Flimsy "slide-on" side shields are not acceptable substitutes.
- * Workers needing corrective lenses must either wear approved safety glasses with prescription lenses and frames that meet or exceed the above-referenced ANSI standard, or wear approved goggles designed to be worn over their regular prescription glasses that meet the ANSI standard.
