

Safety Message of the Day for IMEA Members

Following Lockout/Tagout Procedures Safety Message

Lockout/tagout procedures are essential to ensure the safety of personnel working on energized equipment. These procedures involve isolating and de-energizing equipment, then securing it with locks or tags to prevent accidental energization. It is crucial to understand and follow lockout/tagout procedures to avoid electrical shock or other serious accidents. Always verify that equipment is de-energized and properly locked or tagged out before starting any maintenance or repair work
